

# Workshop #4 Future Inquiry

Exploring the  
normative lessons

This was the last in a series of four  
interdisciplinary workshops  
questioning how the spatial,

we might draw for architects and planners and how we may attempt to implement our findings in design practice and policy.

temporal and psychological ordering of space in the built environment shapes people's capacity to exercise their autonomy within our cities. Through informal presentations of research at the workshops, we explored the nature of spatial order, and the relationship between people and their environments from a range of interdisciplinary perspectives. We aim to establish common ground; understand the nature and breadth of existing research into spatial ordering; define shared concepts and to begin to explore conceptual and normative issues around architecture and urban design.

## Presentations

## Discussion Board

We used online collaboration platform, Miro, to foster participation throughout the session. This allowed for wider contributions in creating a tangible record of the workshop that can be returned to as our thoughts develop.
